“Extensive research has shown that no matter how knowledgeable a clinician might be, if he or she is not able to open good communication with the patient, he or she may be of no help.”

~ Institute for Healthcare Communication

As a student in an interpreter education program, you may be contemplating the future of your career. In what direction do you want to go? Do you want a specific focus? Where can you make both a living and a difference? Interpreting in healthcare settings is a great possibility for you to consider.

Healthcare settings are ones in which the majority of Deaf people and their family members will be involved, and the value of qualified interpreters in these settings is evident. These settings can cover a wide gamut of hospitals, clinics, mental health and substance abuse facilities, private physicians’ offices, rehabilitation centers, domestic violence programs, and nursing homes, among others. Given the need, it is surprising to discover that a national needs assessment survey of Deaf consumers that was conducted by the National Consortium of Interpreter Education Centers (NCIEC, 2008) found that respondents identified these settings as the most difficult ones in which to obtain a qualified interpreter. Part of the reason for this may be the lack of standardized educational programs to prepare healthcare interpreters. This module provides an introduction and inroad into the field, and also offers suggestions for further avenues to developing the needed competencies for working in this area.

There is a wide range of skills needed to work successfully as a medical interpreter. For example, knowledge of medical terminology, procedures, conditions and treatments is needed, along with the ability to express these in both English and ASL. The CATIE Center at St. Catherine University, in St. Paul, Minnesota, in collaboration with the NCIEC, undertook an extensive consultation with medical interpreters and interpreter educators to identify the qualifications needed by medical interpreters. These included:

- Bilingual fluency in English and ASL including the ability to produce and comprehend sociolinguistic variation.
- Understanding of linguistic, social and cultural influences that impact health care interactions (e.g., specialized vocabulary, discourse styles, language register, dynamics of power and prestige between interlocutors, and triadic communication).

1 http://healthcarecomm.org/about-us/impact-of-communication-in-healthcare/
• Adhering to the Registry of Interpreters for the Deaf and the National Association of the Deaf Code of Professional Conduct and familiarity with the NCIHC code of ethics.
• Balancing the need for maintaining professional distance with empathy and flexibility.
• Knowing the laws and policies related to health care settings (e.g., liability, ADA, state’s human rights laws, hospital policies).
• Knowing the general physiological and psychological implications of health care.
• Understanding of various health care approaches (e.g., Chinese medicine, ayurvedic, holistic, homeopathic, Western medicine, hospice).
• Understanding underlying practices of various health care delivery systems and the role of self and others on the health care team (e.g., employing CDIs, Deaf Community Healthcare Workers [CHWs] and advocates when they can enhance the communication).
• Sharing information and resources about communication through advocacy, leadership, education in health care settings

In working with this module, you will have the opportunity to experience some of the learning that medical interpreters need to acquire, and to practice applying this learning in your own interpreting. We hope this will encourage you to continue to learn the skills needed for working in healthcare settings, and that you will become one of the qualified interpreters Deaf people have identified needing.
